Con Corazón Outreach Report

12th June 2024 – Marampaqui

Within our team, doctors play an important role in making their respective treatment plans. There are some limitations, which mainly come from the patients, where it is difficult to follow up on each one of them for different reasons such as lack of communication, they live far away, they do not have access by car, they do not prioritize their health but other things, etc... Despite all this, doctors continue their battle to achieve positive results.

A clear example is that after performing a tooth extraction, the patient should enter a rest period of at least one day. Unfortunately, patients have to walk two or three hours back home, which is not recommended. Some complications that potentially arise are hemorrhage, pain, infection, etc. Another clear example is when patients need to have follow-up due to prolonged medical treatment. Sometimes patients do not appear until after three months after and the treatment originally given no longer works. Despite all this, we strive to continue helping people.

Activities

Medicine, we have seen 27 patients.

Dentist, 15 patients

Laboratory, 7 lab tests were done.

Health promotion for all our patients.

A nice winter time view of Marampaqui. It is dry and cold but when the sun is out it can get really hot.

A patient being thankful. He demonstrates it by a nice and warm hug to our doctor.
