Con Corazón Outreach Report

21th January 2026 – Marampaqui

In the Andean highlands, children frequently suffer from stomach diseases that affect their growth, energy, and daily well-being. These illnesses are often linked to inadequate diets, limited access to clean water, and insufficient handwashing practices. Contaminated food and poor hygiene create an environment where harmful bacteria can easily spread.

At our medical center, the laboratory plays a vital role in addressing this challenge. Thanks to Wendy's careful analysis and dedication, it is possible to accurately identify the specific bacteria responsible for each case. This allows for targeted treatment, improving recovery times and preventing complications.

Beyond treatment, these findings also help guide community education on nutrition and hygiene. By combining diagnosis with prevention, we are not only healing children but also helping families build healthier habits for the future.

Activities

Medicine, we have seen 27 patients.

Dentist, 13 patients

Laboratory, 11 lab tests were done.

Health promotion for all our patients.

Jhony Huillca carefully identifies the medicines each patient needs. These are classified according to their function and scope of treatment, ensuring the right care for every case. She knows exactly where to find each medication, allowing for efficient and timely support for patients.

Wendy's support helps our physicians make well-informed decisions, leading to more effective treatments for children. An integrated medical center functions more efficiently this way, ensuring coordinated care and better health outcomes.
