Con Corazón Outreach Report

20th February 2026 – Marampaqui

During this occasion, the majority if not all of patients attending our medical center in Marampaqui highlands were women. Initially, we questioned why only women had come for consultations. After conducting a few inquiries, we discovered that the local community had recently organized a meeting focused on diseases that primarily affect women. As a result of this gathering, the inhabitants requested that medical appointments be scheduled exclusively for female patients.

In response to this request, we prepared and delivered a speech addressing sexually transmitted diseases (STD). The session was designed to provide clear information, raise awareness, and encourage preventive practices among the women present. While the initiative was well received, it became evident that such discussions should also be extended to men, as these health issues affect the entire community.

By confronting this important topic directly, we were able to foster dialogue and promote understanding. Future efforts will aim to include both women and men, ensuring comprehensive education and shared responsibility for health.

Activities

Medicine, we have seen 25 patients.

Dentist, 13 patients

Laboratory, 17 lab tests were done.

Health promotion for all our patients.
